Weather Evidence Report

Report ID **WE-2026-02-19-C37C7155922C** · Data retrieved Oct 14, 2026, 5:55 PM EDT

401 N COLLEGE AVE, BLOOMINGTON, IN, 47404

February 19, 2026 · local weather date (24 hours) · America/Indiana/Indianapolis

Coordinates	39.16955, -86.53493
County · NWS zones · office	Monroe County, IN · INC105, INZ062 · IND
Location method	US Census Geocoder address match
Address as entered	401 N College Ave, Bloomington, IN
Local day	Feb 19, 2026, 12:00 AM EST to Feb 20, 2026, 12:00 AM EST (2026-02-19 05:00Z–2026-02-20 05:00Z)

Key findings

Peak wind gust, nearest reporting station	**70 mph** (61 kt) at 7:01 PM EST — Bloomington Monroe Co Ap KBMG, 4.7 mi WSW of the site
Liquid precipitation, nearest station	**0.03 in** at KBMG — **incomplete**: 2 of 24 hourly periods have no usable report
Most precipitation, other listed stations	**1.07 in** at Franklin Wwtp (USC00123091), 33.5 mi NE
Temperature range, nearest station	48–68 °F
Warnings whose polygon contained the site	**2**: Tornado Warning 2026-KIND-TO-W-0008 (6:39 PM EST–7:15 PM EST); Tornado Warning 2026-KIND-TO-W-0009 (7:01 PM EST–7:30 PM EST)
Watches / advisories for the site's county or zone	Tornado Watch
Nearest tornado (Storm Events)	**EF2**, path passed **2.0 mi WSW** of the site at its closest; 3.73 mi long, 440 yd wide (event 1318047)
Largest hail reported within 5 mi (LSR)	**1.5 inch** (measured), 1.9 mi SE, 7:05 PM EST
Largest radar-estimated hail within 5 mi	**1.50 in**, 1.2 mi NNE, 7:07 PM EST (KVWX)
Lightning, grid cell containing the site	8 NLDN strikes recorded (UTC days 2026-02-19, 2026-02-20)

Each finding names the record it comes from. Records near the site do not by themselves establish conditions at the property. Detailed records and their limitations follow.

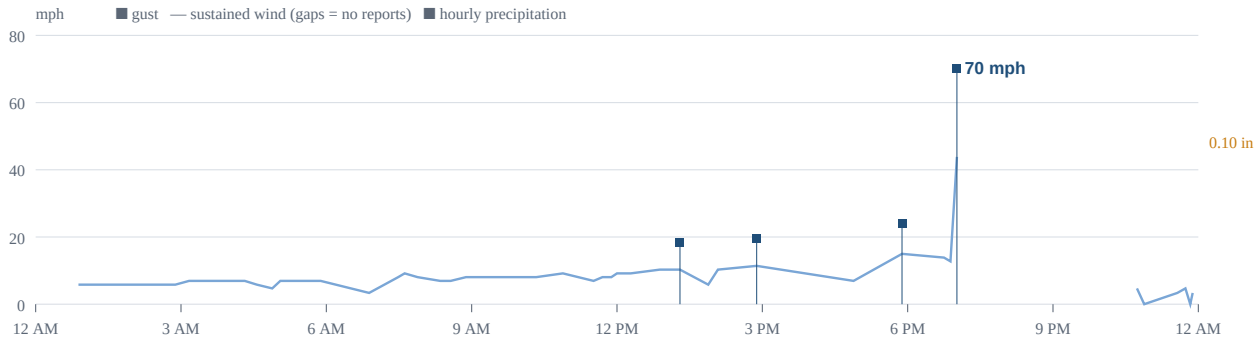

Station-pinned measurements

NOAA GHCNh hourly observations from the nearest stations that reported on February 19, 2026. Every value below was measured at the named station; nothing is blended, averaged across stations or interpolated to the site.

Station	Position from site	Reports	Peak gust	Max sustained	Precip (in)	Temp °F
Bloomington Monroe Co Ap USW00003893 · KBMG ASOS/AWOS airport station (METAR)	4.7 mi WSW	49	70 mph · 7:01 PM EST	44 mph · 7:01 PM EST	0.03 (2 missing hr)	48–68
Martinsville 2 Sw USC00125407 Hourly precipitation gauge (NOAA HPD)	16.8 mi NNE	24	not measured	not measured	0.83	—
Bedford 5 Wnw USW00063898 US Climate Reference Network (USCRN)	19.5 mi S	288	none reported	13 mph · 7:10 PM EST	0.02	53–69
Franklin Wwtp USC00123091 Hourly precipitation gauge (NOAA HPD)	33.5 mi NE	24	not measured	not measured	1.07	—

Observation log — Bloomington Monroe Co Ap (KBMG), 4.7 mi WSW of the site

Station USW00003893 at 39.1431, -86.6167, elevation 253 m; ASOS/AWOS airport station (METAR). All 49 reports in the local day are listed: routine hourly METARs and special reports (SPECI) issued when conditions changed.

Wind is the reported 2-minute sustained speed; gust is the peak short-duration speed in the report. A 'PK WND' remark gives the highest instantaneous wind since the previous routine report and is included in the peak gust where it is higher. The highlighted row holds the peak gust.

Precipitation in a report is the running total since the last routine METAR. A blank means the report carried no precipitation group. '<0.01' is a measured trace.

2 hourly precipitation period(s) had no routine report or the station reported its precipitation sensor or amount as unavailable; the daily total excludes them and should be treated as a minimum.

Some reports end with '$', the ASOS maintenance indicator: the station flagged that a sensor needed maintenance when it sent them.

NWS watches, warnings and advisories

Every NWS VTEC event in effect for the site's location during February 19, 2026. For polygon-based warnings, each bulletin's polygon is tested against the site's coordinates.

Event / NWS event ID	In effect (local)	Site relation	Bulletins
Tornado Watch 2026-KIND-TO-A-0010	Feb 19, 2026, 1:21 PM EST – 11:00 PM EST	County/zone listed (INC105)	11
Tornado Warning 2026-KIND-TO-W-0008	Feb 19, 2026, 6:39 PM EST – 7:15 PM EST	**Inside warning polygon**	3
Tornado Warning 2026-KIND-TO-W-0009	Feb 19, 2026, 7:01 PM EST – 7:30 PM EST	**Inside warning polygon**	3

Bulletin counts include updates (Severe Weather Statements) and are not counts of distinct storms. Full bulletin text is reproduced in Appendix B.

NWS Local Storm Reports within 25 miles

Preliminary reports from spotters, officials, the public and automated stations, as issued by NWS offices, with each report's position relative to the site.

Report remarks (as issued)

#	Remark	Product
L01	Time estimated from radar. Relayed via social media	202602200620-KIND-NWUS53-LSRIND
L02	Corrects previous hail report from Bloomington for time. Trees were blown down...2 foot diameter rotten trees at Hickory Grove Apartments near Gifford Road and west of Curry Pike. Health trees of 1 1/2 to 2 feet in diameter were blown down at Highland Village Apartments near the same area	202602200137-KIND-NWUS53-LSRIND
L04	Delayed report. Time approximated by radar. Rough location...described as north of Worthington. Along US 231, several power poles were pushed over and left leaning to the east, but were not completely toppled	202602200620-KIND-NWUS53-LSRIND
L05	Corrects previous hail report from 2 NW Worthington. Report from mPING: Half Dollar (1.25 in.)	202602200620-KIND-NWUS53-LSRIND
L10	An EF-2 tornado with peak wind speeds of 120 mph and a path length of 3.73 miles began at this location. The maximum path width was 440 yards with the tornado impacting both residential and commercial buildings across western Bloomington	202602210316-KIND-NWUS53-LSRIND
L11	Delayed report. Deck was covered with quarter inch stones with full one inch stones mixed in about 1 to 2 per square foot	202602200620-KIND-NWUS53-LSRIND
L12	Bloomington Monroe County Airport	202602200620-KIND-NWUS53-LSRIND
L13	Delayed report. Time estimated from radar. Report from mPING: Ping Pong Ball (1.50 in.)	202602200620-KIND-NWUS53-LSRIND
L14	Delayed report. Damage to Monroe County Humane Association at 791 S Fieldstone Blvd, Bloomington, IN	202602200620-KIND-NWUS53-LSRIND
L15	Up to pea size hail covered the ground. Rough approximation of location that was described as north of Bloomington. Time estimated from radar	202602200620-KIND-NWUS53-LSRIND
L16	Report from mPING: Half Dollar (1.25 in.)	202602200620-KIND-NWUS53-LSRIND
L17	Corrects previous hail report from Woodville Hills	202602200620-KIND-NWUS53-LSRIND
L18	Trees were blown down...2 foot diameter rotten trees at Hickory Grove Apartments near Gifford Road and west of Curry Pike. Health trees of 1 1/2 to 2 feet in diameter were blown down at Highland Village Apartments near the same area	202602200620-KIND-NWUS53-LSRIND
L19	A few tree branches snapped	202602200620-KIND-NWUS53-LSRIND

NCEI Storm Events Database

NOAA's reviewed record of significant weather, compiled by NWS offices after the event. Events overlapping the local date within 25 miles of the site, or listed for the site's county or forecast zone.

Edition 2026-09-18; this edition covers events through 2026-06.

#	Event	Local time	Magnitude	From site	Damage	Source / ID
S01	**Hail** Owen, Indiana	5:54 PM EST	1.00	24.3 mi NW	—	Public 1317204
S02	**Thunderstorm Wind** Greene, Indiana	6:30 PM EST	50.00 EG	24.0 mi W	5.00K	Amateur Radio 1317240
S03	**Hail** Greene, Indiana	6:35 PM EST	1.25	24.5 mi W	—	Public 1317221
S04	**Tornado** Monroe, Indiana	6:57 PM EST – 7:06 PM EST	EF2, 3.73 mi × 440 yd	2.0 mi WSW	20.00M	NWS Storm Survey 1318047
S05	**Thunderstorm Wind** Monroe, Indiana	7:01 PM EST	61.00 MG	4.8 mi WSW	—	ASOS 1317237
S06	**Hail** Monroe, Indiana	7:05 PM EST	1.50	1.9 mi SE	—	Public 1317226
S07	**Hail** Monroe, Indiana	7:21 PM EST	1.25	7.9 mi E	—	Amateur Radio 1317209
S08	**Thunderstorm Wind** Brown, Indiana	10:27 PM EST	56.00 MG	21.0 mi ESE	2.00K	Public 1317296

Magnitude: hail in inches; wind in knots (MG measured, EG estimated); tornadoes by EF rating. Tornado distance is to the straight line between the published start and end points, an approximation of the damage path.

Event narratives (as published)

#	Narrative
S02	Several power poles were pushed over, but not completely toppled by thunderstorm wind gusts.
S04	An EF-2 tornado tracked 3.73 miles through west-central Monroe County, across the Bloomington Airport up to the Interstate Route 69 interchange with Indiana Route 48. The maximum path width was 440 yards with the tornado causing significant damage to neighborhoods, apartments, businesses, and portions of the airport. Extensive tree damage also occurred.||The tornado first developed in wooded areas west of the airport before rapidly intensifying as it moved into a small neighborhood just west of the airport. This area experienced the event's most intense winds, extensive tree damage along with multiple points of structural damage to homes. As the tornado progressed eastward, it caused damage to an airplane hangar. While passing over the airfield, the KBMG ASOS recorded a wind gust of 70 mph. The tornado continued east-northeast, damaging numerous homes before striking a newly constructed neighborhood where additional high-end EF-1 to low-end EF-2 damage occurred. Additional EF-1 damage was observed further northeast at an apartment complex. After producing damage to a bank overhang and causing roofing damage to several warehouse structures, the tornado dissipated near the east end of this business district, immediately west of I-69. Peak wind speeds were estimated at 120 mph.
S05	The Monroe County Airport ASOS gusted to 61KT as the EF2 tornado vortex center tracked 700 yards to the north-northwest.
S08	A 64 mph thunderstorm wind gust was recorded with a few tree branches snapped.

Episode context (printed once per episode)

Episode 210698. A strengthening storm system lifted through the Middle Mississippi Valley on the 19th, dragging its warm frontal zone northward through the Midwest, and bringing near-record high temperatures and anomalous dewpoints into central Indiana. Multiple rounds of severe weather occurred over the region, from early morning large hail in two far-northern zones, covering roads in Warren County, to more organized evening severe weather from rotating supercell thunderstorms. Through the evening of the 19th, the destabilized atmosphere combined with a stregthening low-level jet stream that progressed eastward into the region, boosting 0-1 km wind shear as high as 300 m2/s2. A resultant cluster of discrete late-day to evening supercells were focused along the frontal zone, near or south of the Interstate 70 corridor, and produced scattered large hail over 6 counties and isolated wind damage to trees and/or power poles in 4 counties. ||A stronger supercell with a history of producing two weak tornadoes in Crawford County, Illinois, continued into central Indiana, spawning an EF-0 tornado in Sullivan County, an intense EF-2 just west of Bloomington that caused extensive structural damage to homes, apartments, and airport facilities, and a brief EF-U in Decatur County; this cell also produced ping-pong ball (1.50-inch diameter) sized hail in Greene and Monroe Counties.

Hail and lightning

NEXRAD radar hail detections within 15 miles

Radar-estimated maximum hail size for each storm cell on each radar scan (NEXRAD Level-III hail algorithm, via NOAA SWDI). These are estimates of hail aloft, not ground measurements; several radars may detect the same storm.

Local time	Radar · cell	Max size (in)	Prob. hail	Prob. severe	From site

Lightning strike counts within 15 miles

Counts of NLDN lightning strikes per 0.1° grid cell (about 6–7 miles across) per UTC day, as published by NOAA NCEI. Point-level strike locations and times are licensed data and are not included. A UTC day runs from 7 PM to 7 PM Eastern Standard Time (adjust for other zones), so a count can include strikes outside the local date.

Cell centre	From site	Strikes 2026-02-19 UTC	Strikes 2026-02-20 UTC
39.2, -86.5	**contains the site**	1	7
39.2, -86.6	4.1 mi WNW	3	5
39.1, -86.5	5.2 mi SSE	1	1
39.1, -86.6	5.9 mi SW	5	1
39.2, -86.4	7.5 mi ENE	0	6
39.2, -86.7	9.1 mi WNW	7	4
39.3, -86.6	9.7 mi NNW	0	8
39.1, -86.7	10.1 mi WSW	13	0
39.3, -86.4	11.5 mi NE	0	1
39.0, -86.5	11.9 mi S	0	3
39.0, -86.6	12.2 mi SSW	0	4
39.3, -86.7	12.6 mi NW	0	3
39.2, -86.3	12.8 mi E	0	10

Cell centre	From site	Strikes 2026-02-19 UTC	Strikes 2026-02-20 UTC
39.1, -86.3	13.5 mi ESE	0	1
39.2, -86.8	14.4 mi W	1	1
39.0, -86.7	14.7 mi SW	0	2
39.1, -86.8	15.0 mi WSW	10	0

A count of 0 means the cell is not in the published file for that day; NCEI lists only cells with at least one strike.

KBMG also reported thunder or lightning in 11 report(s), first at 5:53 PM EST (see the observation log).

Sources and limitations

Data sources

Station measurements: NOAA NCEI Global Historical Climatology Network – hourly (GHCNh), per-station per-year files. Units converted from metric for display. Quality codes: '2', '3', '6', '7' mark suspect or erroneous values in the legacy source; lowercase letters mark GHCNh checks the value failed; unflagged values passed or were not checked.

Warnings and bulletins: NWS VTEC events and the verbatim text of NWS bulletins, retrieved from the Iowa Environmental Mesonet archive of NWS products (Iowa State University). Zones from api.weather.gov.

Local Storm Reports: NWS Local Storm Reports via the Iowa Environmental Mesonet. Preliminary; duplicates and corrections are reproduced as issued.

Storm Events: NOAA NCEI Storm Events Database bulk CSV (edition noted in that section).

Hail and lightning: NOAA NCEI Severe Weather Data Inventory (NEXRAD Level-III hail) and NCEI daily NLDN lightning tile counts.

Location: US Census Bureau Geocoder; timezone from coordinates (IANA tz database).

Distances and bearings

Distances are great-circle miles from the site's coordinates; bearings are the direction from the site to the record (e.g. '4.6 mi WSW' means the record lies west-southwest of the site). A record's own position may be approximate: storm reports are often given to the nearest town or road.

What this report establishes

This report compiles public US government weather records for the selected location and date. Records near the site do not by themselves establish conditions at the exact property. Missing values are not zero, and 'not published yet' is different from 'no record'. It does not determine property damage, causation, insurance coverage or legal admissibility, and it is not a certified government record or expert opinion.

Retrieval and report identity

Data retrieved: Oct 14, 2026, 5:55 PM EDT. Report ID: WE-2026-02-19-C37C7155922C. Every source response used is stored unmodified; the hashes below identify those exact bytes, and the report ID is derived from them and their retrieval times, so this report can be regenerated byte-for-byte and verified.

BULLETIN - EAS ACTIVATION REQUESTED
Tornado Warning
National Weather Service Indianapolis IN
639 PM EST Thu Feb 19 2026

The National Weather Service in Indianapolis has issued a

* Tornado Warning for...
  Western Monroe County in south central Indiana...
  Southeastern Owen County in west central Indiana...
  Northeastern Greene County in southwestern Indiana...

* Until 715 PM EST.

* At 639 PM EST, a severe thunderstorm capable of producing a tornado
  was located near Bloomfield, or 20 miles west of Bloomington,
  moving east at 40 mph.

  HAZARD...Tornado and ping pong ball size hail.

  SOURCE...Radar indicated rotation.

  IMPACT...Flying debris will be dangerous to those caught without
          shelter. Mobile homes will be damaged or destroyed.
          Damage to roofs, windows, and vehicles will occur.  Tree
          damage is likely.

* Locations impacted include...
  Bloomington, Bloomfield, Ellettsville, Stinesville, Indiana
  University, Solsberry, Smithville, Freedom, and Whitehall.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

TAKE COVER NOW! Move to a basement or an interior room on the lowest
floor of a sturdy building. Avoid windows. If you are outdoors, in a
mobile home, or in a vehicle, move to the closest substantial shelter
and protect yourself from flying debris.

BULLETIN - EAS ACTIVATION REQUESTED
Tornado Warning
National Weather Service Indianapolis IN
701 PM EST Thu Feb 19 2026

The National Weather Service in Indianapolis has issued a

* Tornado Warning for...
  Central Monroe County in south central Indiana...
  Western Brown County in south central Indiana...

* Until 730 PM EST.

* At 701 PM EST, a confirmed large and extremely dangerous tornado
  was located near Bloomington, moving east at 45 mph.

  This is a PARTICULARLY DANGEROUS SITUATION. TAKE COVER NOW!

  HAZARD...Damaging tornado.

  SOURCE...Emergency management confirmed tornado.

  IMPACT...You are in a life-threatening situation. Flying debris
```

```
          may be deadly to those caught without shelter. Mobile
          homes will be destroyed. Considerable damage to homes,
          businesses, and vehicles is likely and complete
          destruction is possible.

* Locations impacted include...
  Bloomington, Ellettsville, Yellowwood Lake, Indiana University,
  Woodville Hills, Lake Lemon, Unionville, and Whitehall.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

To repeat, a large, extremely dangerous and potentially deadly
tornado is on the ground. To protect your life, TAKE COVER NOW! Move
to a basement or an interior room on the lowest floor of a sturdy
building. Avoid windows. If you are outdoors, in a mobile home, or in
a vehicle, move to the closest substantial shelter and protect
