SELECTED LOCATION & WEATHER DATE

Bloomington

IN, USA

February 19, 2026

America/Indiana/Indianapolis · local weather date

DATA SOURCES

NOAA and other weather networks
Compiled by Visual Crossing for this location.

Regional reports and NWS bulletins provide separate context. Nearby records do not establish conditions at this exact property.

WEATHER MEASUREMENTS

Precipitation	Peak wind gust	Highest hourly wind speed	Temperature range
0.32 in · liquid equivalent	**31.5** mph	**14.9** mph	**48.0° – 67.8°** Fahrenheit

Reported conditions: Rain, Partially cloudy

Warnings and regional reports

3 Tornado Warning bulletins; 7 Tornado Watch bulletins; 1 Special Weather Statement bulletin were recorded for the selected date.

6:57 PM EST: Emergency management reported a confirmed tornado.

10 regional records: Hail, Tornado, Thunderstorm Wind. These are reports from the surrounding area, not a count of distinct storms.

Chronological bulletin summaries and source records appear after the hourly observations.

Coverage: 24 distinct hourly timestamps out of 24 in this local date are supplied. Individual measurements may be unavailable. Precipitation is liquid equivalent; snowfall and snow depth are separate. Source details and retrieval times appear in Sources and limitations.

Tornado Warning issued February 19 at 6:39PM EST until February 19 at 7:15PM EST by NWS Indianapolis IN

The National Weather Service in Indianapolis has issued a

* Tornado Warning for... Western Monroe County in south central Indiana... Southeastern Owen County in west central Indiana... Northeastern Greene County in southwestern Indiana...

* Until 715 PM EST.

* At 639 PM EST, a severe thunderstorm capable of producing a tornado was located near Bloomfield, or 20 miles west of Bloomington, moving east at 40 mph.

HAZARD...Tornado and ping pong ball size hail.

SOURCE...Radar indicated rotation.

IMPACT...Flying debris will be dangerous to those caught without shelter. Mobile homes will be damaged or destroyed. Damage to roofs, windows, and vehicles will occur. Tree damage is likely.

* Locations impacted include... Bloomington, Bloomfield, Ellettsville, Stinesville, Indiana University, Solsberry, Smithville, Freedom, and Whitehall.

Preparedness instructions (as issued)

TAKE COVER NOW! Move to a basement or an interior room on the lowest floor of a sturdy building. Avoid windows. If you are outdoors, in a mobile home, or in a vehicle, move to the closest substantial shelter and protect yourself from flying debris.

Warning language reproduced from the matching NWS bulletin in the IEM archive.

Tornado Warning · B10

NWS Indianapolis IN

Bulletin issued: Feb 19, 2026, 6:51 PM EST
Bulletin expires: Feb 19, 2026, 7:15 PM EST
Expected warning end: Feb 19, 2026, 7:15 PM EST
NWS event ID: 2026-KIND-TO-W-0008

Tornado Warning issued February 19 at 6:51PM EST until February 19 at 7:15PM EST by NWS Indianapolis IN

At 651 PM EST, a severe thunderstorm capable of producing a tornado was located 10 miles south of Spencer, or 12 miles west of Bloomington, moving east at 40 mph.

HAZARD...Tornado and ping pong ball size hail.

SOURCE...Radar indicated rotation.

IMPACT...Flying debris will be dangerous to those caught without shelter. Mobile homes will be damaged or destroyed. Damage to roofs, windows, and vehicles will occur. Tree damage is likely.

Locations impacted include... Bloomington, Ellettsville, Stinesville, Indiana University, Solsberry, Smithville, Freedom, and Whitehall.

Preparedness instructions (as issued)

TAKE COVER NOW! Move to a basement or an interior room on the lowest floor of a sturdy building. Avoid windows. If you are outdoors, in a mobile home, or in a vehicle, move to the closest substantial shelter and protect yourself from flying debris.

Warning language reproduced from the matching NWS bulletin in the IEM archive.

Tornado Warning · B11

NWS Indianapolis IN

Bulletin issued: Feb 19, 2026, 6:57 PM EST
Bulletin expires: Feb 19, 2026, 7:15 PM EST
Expected warning end: Feb 19, 2026, 7:15 PM EST
NWS event ID: 2026-KIND-TO-W-0008

Tornado Warning issued February 19 at 6:57PM EST until February 19 at 7:15PM EST by NWS Indianapolis IN

At 656 PM EST, a confirmed tornado was located 8 miles west of Bloomington, moving east at 40 mph.

HAZARD...Damaging tornado and ping pong ball size hail.

SOURCE...Emergency management confirmed tornado.

IMPACT...Flying debris will be dangerous to those caught without shelter. Mobile homes will be damaged or destroyed. Damage to roofs, windows, and vehicles will occur. Tree damage is likely.

Locations impacted include... Bloomington, Ellettsville, Indiana University, Solsberry, and Whitehall.

Preparedness instructions (as issued)

To repeat, a tornado is on the ground. TAKE COVER NOW! Move to a basement or an interior room on the lowest floor of a sturdy building. Avoid windows. If you are outdoors, in a mobile home, or in a vehicle, move to the closest substantial shelter and protect yourself from flying debris.

Warning language reproduced from the matching NWS bulletin in the IEM archive.

Sources and limitations

Weather measurements

Visual Crossing Timeline API, requested by latitude and longitude for the local date with U.S. units and hourly detail. The provider compiles NOAA and other networks and can combine multiple stations and other sources.

Warnings and regional records

NWS bulletin records supplied for this search. Updates are retained and grouped only through official identifiers or references. NWS Local Storm Reports via IEM.

Location, time and measurement coverage

Coordinates: 39.1696, -86.5386. Local timezone: America/Indiana/Indianapolis. Hour labels follow this timezone, including daylight-saving changes. A local date can contain 23, 24 or 25 hours.

Nearby reference station: Monroe County (KBMG), 4.6 miles from the location. This reference station is not established as the source of every value. Provider-returned station identifiers: KBMG, F2670, HDRI3, KIND, KHUF.

“Highest hourly wind speed” is the maximum of the returned hourly wind-speed values; it is not a claim about the maximum sustained wind at every moment of the day. Precipitation is liquid equivalent; snowfall and snow depth are separate. Hail and lightning observation feeds were not queried for this web report; regional hail reports, when supplied, remain separate.

Retrieval and report identity

Weather retrieved: Sep 9, 2026, 7:54 PM EDT.
Report generated: Sep 9, 2026, 8:56 PM EDT.
Canonical report ID: SR-2026-02-19-KBMG-1771785178016.

Warning language and instructions were recovered from NWS text bulletins in the IEM archive, matched by office, issue time, geographic segment and original wording. Printed message-expiry times are retained. Archived VTEC identifiers link updates; original CAP message IDs remain unavailable.

What these records establish

This report compiles the available records for the selected location and date. Missing values are not zero; unavailable archives and no matching records have different meanings. County archive records whose supplied start time falls on the selected local date. Ongoing events that began earlier may be absent. The existing endpoint returned preliminary Local Storm Reports; archive completeness was not independently established. Some returned narratives end mid-word; they are reproduced as supplied without invented completions. It does not determine property damage, causation, insurance coverage or legal admissibility, and is not a certified government record or expert opinion.
